You might be amazed what people will
notice... A 10ms flash of an LED
at full throttle is quite noticeable.

Yes, but does it really matter. We expect something strange
at
startup anyway.

Well, for the devices we build at my place of work, random flashing at
power-up like that would eventually put us out of business. Customers
will not accept such glitches, period.

I can't image what application would be so mission critical at power
up,

As an example <http://www.navitastechnologies.com/hydraulic.html>

Robert
