

Re: What programming language is the most widely used to make viruses?

[0] But no templates. I've never quite got the hang of templates.

[1] The Software Engineering part of my degree course seems to boil down to:

- * C++ == bad
- * Perl == worse
- * Assembly == useless
- * Java/Haskell == best

Which inclined me, in my usual contrary fashion, to start the Megaplex Project: aiming to unify all languages and techniques once and for all in the most spectacularly nasty programming language ever conceived.

Alex Davidson
