I want my Browser not to show menubar,addressbar,toolbar and etc. when the first page of my site become loaded.

Tough. I control what I see on my computer. It's mine, I paid for it, you have no right to control it.

I use this code for it:

```
<html>
<head>
<title>Haniye</title>

<script type='text/javascript'>
<!--
function SetWindow_Browser()
{

var height = 700 //Set height
var width = 700 //Set width
var name = "winname" //Set window name
var top = 20 //Set distance from top
var left = 20 //Set distance from left

//script revision by A. Kuehler, XombieRx
if(navigator.appName == "Netscape") //start handling for Netscape
and Mozilla
{

netscape.security.PrivilegeManager.enablePrivilege("UniversalBrowserWrite")
window.menubar.visible = false;
window.locationbar.visible = false;
window.scrollbars.visible = false;
window.personalbar.visible = false;
```

Re: not to show menubar,addressbar & etc of browser without any security confirm

```
window.statusbar.visible = false;
window.toolbar.visible = false;

netscape.security.PrivilegeManager.revertPrivilege("UniversalBrowserWrite")
resizeTo(width,height); //replace with actual numerical values
} //end if handling for Netscape/Mozilla

else
{ //for all other browsers
//script provided by superslamwich
if(document.location.search=="")
{
window.open(document.location + "?
newwin=true",name,"fullscreen=no,toolbar=no,status=no,menubar=no,scrollbars=no,resizable=no,directories=
+ width + ",height=" + height + ",left=" + left + ",top=" + top);
self.opener=""
self.close()
}
else
{
window.opener.close();
}
} //end handling for all other browsers
}
-->

</script>

<BODY onload="SetWindow_Browser();">
</body>
</html>
```

when I use this code in Mozilla firefox ,It opens dialog confirm, with this title:"internet security" and with this text:"A script "file://" is requesting enhanced abilities UNSAFE and could be used compromise your mashine or data" & ask me to allow or deny it.

That won't happen when I load your page with Firefox, thanks to Adblock Plus. Hopefully, no savvy Firefox user surfs the web without it.

if I push allow botton It will works but I don't want to show this dialog ,I wanna do it directly without any question. how could I do it?Is it possible?and do u know another way to hidden menubar,toolbar,ect? and also when I use this code in Internet Explorer it appears menu at

Re: not to show menubar,addressbar & etc of browser without any security confirm

the top of Browser 's window with this content:

"to help protect your security ,Internet Exlprer has restricted this file from showing active content that could access your computer click here for option" and when I seclect "allow blocked content",It will does something that I want.but I don't want to show this menu too.thx

What makes you think you have the right to do this? You do not own, and have no right to dictate the operation of, other people's computers. This is the sort of technique that spammers, phishers, and criminal sites seeking to install spyware, keyloggers, and other malware use.

People trying to do this sort of thing deserve to fail.

Of course, for really suspect sites, there's Opera where I have set the options to prevent any site from turning off the address and tool bars, even if I have enabled scripts.
