Hi,

First of all I want to say "thanks" to KC and Alex for help.

I made DTS package to transfer datas between to servers ( both SQL Server 2000).

I tried to "Schedule Package" to run it ones a day. The system made a "job", but when it runs – it fails with message"(reason: The system cannot find the file specified)".

I can run this package manually – by "Execute Package" – everything is OK then.

But I need to autorun it.

Please help...
