Hello,

I am working with MS Access database through JDBC. My application allows to insert new data to the database and to view its contents. The problem arises when I want to view my table just after inserting new data, because then I do not see new row (but when I close and open again the application, the new row exists... and just after inserting when I open MS Access I also see it).

My code:

```
// inserting new data
PreparedStatement stnt = conn.prepareStatement("INSERT INTO Addresses
(name, value, prize, date) VALUES (?, ?, ?, ?)");
stnt.setString(1, name);
stnt.setDouble(2, value);
stnt.setDouble(3, prize);
stnt.setDate(4, sqlDate);
stnt.executeUpdate();
conn.commit();
stnt.close();

// viewing data
ResultSet rs = null;
Statement stmt = conn.createStatement();
rs = stmt.executeQuery("SELECT * FROM Addresses");
while(rs.next()) {
// displaying
}
rs.close()
stmt.close();
```

Any ideas??

Regards, mark

.
