Do the Java programs written by other people display this effect?

To test this..

Visit this page,
<<http://www.physci.org/launcher.jsp?class=/codes/io/URLIOFrame>>

Click the button at the top.
'Launch URLIOFrame'

Select the third choice from the dropdown list
(the source code shown in the web page).

That should produce a frame on screen with a scrollable area. Does that lock for you?

If so, it sounds as if you have a seriously broken Java installation (it scrolls as expected, for me).

If not, then I suggest the problem is in your code, which is ..where?
