There is one thing that is not working properly: my icon that I set for the main window (JFrame) is not displaying under Windows when using Alt-Tab. It does display fine in the window itself and in the task bar, but not when I use Alt-Tab.

Maybe a bug related to the new 1.6 feature which allows you to specify multiple icon images. The platform chooses the best image where needed, e.g. a 16x16 image as title bar icon, and a 32x32 one as Alt-Tab icon

<[http://java.sun.com/javase/6/docs/api/java/awt/Window.html#setIconImages\(java.util.List\)](http://java.sun.com/javase/6/docs/api/java/awt/Window.html#setIconImages(java.util.List))>

I broke it down to a reproducible test case now. It does seem to be a bug in 1.6. When using `setIconImage()` everything seems fine until you open a modal dialog (e.g. a `JFileChooser`). After that the frame icon will revert back to the default Java icon
