I am try to edit my table three columns:

Observation Time, Value and Mode where they are  
Timestamp, Double and String.

My first question is do I need to create three  
different DefaultCellEditors, one for Timestamp, one  
for Double and one for String?

Because I am thinking use JFormattedTextField instead just JTextField,  
which I can force user type in correct Timestamp format and Double  
digits.

I went to this page

<http://java.sun.com/docs/books/tutorial/uiswing/components/table.html>

But I couldn't find some sample codes.  
I also checked out Sun's TableDemo.java in SwingSet2. I only  
found JComboBox CellEditor codes.

Can someone out there point me some sample codes how to create  
some table cell editor?

Thank Q very much in advance!
