When we created animated applications in an Applet
(e.g. a ball moving from 1 position to another)
we called the repaint() method to refresh the screen.
When I do the same in java applications(using Frame and Panel),
I am unable to refresh screen.
(translated from text speech)

see <http://mindprod.com/jgloss/textspeak.html> for why you should
avoid using. it.

Are you tying up the main thread? It needs to be doing nothing, not
even sleeping, to get a chance to service the enqueued repaint request.

See <http://mindprod.com/jgloss/repaint.html> and follow links.

Sorry for the lateness. My newsservers keeps rejecting posts sometimes
for days before accepting them.
