Why aren't the tabs in my JTabbedPane showing? I have a JTabbedPane with a number of JPanels placed on a JPanel in a JFrame, but the entire display is just empty. I made sure to call setVisible to be safe.

The solution to your problem is explained here:
<<http://sscce.org/>>

Is that a bad joke? There's nothing useful there. You don't even seem to have read my original question.

If it is a bad joke then it follows from a bad troubleshooting query.
No useful troubleshooting information in the OP.

To the OP: Why would you consider it a joke, much less a bad one? It was the single best piece of advice anyone here could have given you.

You want information, you have to give information. It's all explained on the referenced site.
