I did the following and the program compiled but when execute, it sits and wait for input.

What did you expect? You said wait until the user gives an input, so it does. It will wait patiently like the robot in the parking garage at the restaurant at the end of the universe with the brain the size of a planet. (A Douglas Adams reference).

If you want it to give up after X seconds, you need some sort of timer. I strongly doubt that is what you prof wanted, however. see <http://mindprod.com/jgloss/timer.html>
