Hi all

I have read the net and notice this problem is caused by the version of compiler between 1.5 and 1.4.

I tried to use the follow codes to overcome the warning msg. "uses unchecked or unsafe operations" but not able to. Please advice. Thanks.

[code]

```
public class XXX
{
private ArrayList <Customer> CustDB;
.....
.....
public static void main(String[] args)
{
.....
.....
.....
FileInputStream readFile = new FileInputStream("cust.dat");
ObjectInputStream read = new ObjectInputStream(readFile);

CustDB = (ArrayList<Customer>)read.readObject();
}
}
```

[/code]

I tried to typecast the read object, but yet the warning still exists.
May I know where have I did wrong?

.
