I think the OP meant "Can somebody point me *TO* a good library?" rather than "Can somebody point me to *TWO* good libraries".

Also, if we're going to be pedantic, you should probably phrase it as "Ask for information that is both helpful to you and which requires the minimal amount of effort for other people to provide, so as to maximize the chance that the effort required is below those people's laziness-threshold and thus the chance that they actually help you." Otherwise, to ask for *any* information might yield results such as "The earth is round", "I like cheese", "42", etc.

That being said, I agree with Andrew's request for more specifics. What kind of file size limitations are we looking at here?
