Hi,

when I stop a java program in a debugger (e.g. Eclipse), why I cannot call methods like
System.out.println(someObject)
on data from my program? When I try to evaluate this, Eclipse says:
com.sun.jdi.InvalidTypeException: Type of the value not compatible with the expected type. occured invoking method.

Try selecting an element and Ctrl+Shift+I, or right-click -> Inspect.
or Eclipse specific questions, see news.eclipse.org/eclipse.newcomer

HTH, H.

Hendrik Maryns
