Thanks for the quick response..Yeah that's right. i want to find the number plate from a given image. To draw a box around it and extract it for segmentation and ocr.

I read many articles about it and it will be a great if any of u guys can give me some steps, algorithms or coding to do this

Pardon the perhaps obvious question... but why do you think we'll do better than established literature from people who know what they are doing? If you find something particularly challenging or otherwise have a specific question, please ask. Otherwise, no one here can likely do better than duplicate the existing literature, and it would be a waste of time to do so.
