[http://java.sun.com/j2se/1.4.2/docs/api/java/lang/String.html#split\(java.lang.String\)](http://java.sun.com/j2se/1.4.2/docs/api/java/lang/String.html#split(java.lang.String))

See `java.util.Arrays.toString()` and `.deepToString()`

You get a load of unwanted characters in your string if you do that. I think you are still left with writing a little concatenation loop.
