Please pay close attention to replies.

server MIME type: text/plain
proper MIME type:
application/x-java-jnlp-file

..How should I correct that problem?

<<http://www.google.com/search?&q=jws+mime>>

Hello Andrew, thanks for this. Changing this mime thing in konqueror looks horribly complicated, but I'll try.
Ivan

On second thoughts, why does my browser work ok with other people's web start? This suggests that the file associations are all right anyway.
Ivan
