is there any kind of font/typeset (sorry for the vagueness) available in java that allows the expression of equations or algebraic expressions?

i am meaning something like $x^3 + 3x^2 - 5$, where here the '3' and the '2' indices would be raised to the top right of the 'x' symbol so as to appear as it would be written in a math text book or whatever.

anyone know what i'm on about here :)
