Thank you so much for your help, Nigel

Your explanation is very helpful to me. So there is no way to implement such program, cause the intention for doing this is because I will receive alot of email containing data everyday, which currently I have to manually open the email and convert to Excel. which waste alot of my time. so I would like to implement something that automatically check the email for new mail and convert it to excel in a folder, I am really desperate need your valuable suggestion? >.<

There is no way that you can perform that operation with SquirrelMail/JavaMail. You might be able to do something as outlined by RedGrittyBrick with HTTP. But that would require you figuring out how to authenticate with SquirrelMail, then check your mail and download it. Not trivial, and not something I can assist with.

What you really need to do is talk to your mail admins. about your requirements and how they can be met. Direct IMAP access would be best, then you can use JavaMail to access your mail.
