

WebLogic hot swapping advice

Recently I've been using WebLogic with Eclipse with the MyWL WebLogic plug-in. This configuration easily lets me debug my WebLogic code and also run an ANT script that deploys an ear file to my server that is running in dev mode which auto reloads my app. The problem is now I'm working on a huge app and just copying the ear file to my server doesn't work great as it takes around 20 minutes to reload. Does anyone have some good configuration ideas for WebLogic and Eclipse that will let me make changes to my code and have WebLogic hot swap my code changes for me?

I saw that BEA has a new WebLogic Eclipse plug-in. Does this offer any advantages over MyWL?

Thanks a lot!
