[ a bunch of off-topic junk about java ]

Talking about off-topic in a thread marked OT is, um, metaofftopic.

4. Build a Java application they will have to download and install and so maybe I also have to provide an installer? Maybe not and not the end of the world, how hard can an installer be?

1) Get a version of Netbeans and build an application. Don't worry about the installer, use Java Web Start:

<http://java.sun.com/products/javawebstart/>

thanks!

2) Post further questions to comp.lang.java or whatever.

I want intelligent answers. Are you saying the people on c.l.java are smarter than people on c.l.lisp?

Are you people going to let Thomas get away with that? Wow.

cheers, kenny
