Hi everyone,

Sorry to bother you, have just spent the last few hours trying to solve this. Have uncommented the line in php.ini, ensured the client tools are installed. However when I try and view a PHP page now, the browser just hangs indefinitely. If i take away the line in php.ini everything returns to normal. Have heard I have to recompile with the freetds library but am i not right in saying that is for unix/linux?

Thanks for ur help,

Kieran
