Hrrmm. Is there some way to be able to sort/order the results by numeric
value? Highest to lowest?

Something while making the WHILE array perhaps?

I don't really know how to begin looking to do something like that. If it's
possible, a simple pointer, the name of the process, is all I need and I'll
go look into it.

I just want to be able to dynamically sort the results on a Webpage in
realtime. =/

Thanks!

Liam
