Hi *,

I have a website running for a bunch of people, written in PHP. Everyone has it's own login, I use some session-based authentication mechanism and a MySQL database for storing the users / passwords /

Now I'd like to integrate some 3rd-party-forum into this site, something like phpBB or similar, could also be a more simple one, it really doesn't matter. But the point is, I don't want that my users have to login twice, once for my site, and a second time for the forum. I want to have the forum and my site share the same (existing) user database.

So I need an (existing), preferably GPL'ed, preferably PHP-based forum software with some kind of external login (e.g., using cookies, PHP sessions, \$PHP_AUTH_USER, or whatever). Sure, I could hack one, but isn't there a better solution?

Does anyone of you such a forum? Please let me know...

Thanks,
Egon Schneider.
