Not sure if this is the right group for this question but here goes anyway.

Does using index.php instead of index.htm affect the way that your site is crawled by major search engines? Reason I ask is that I have 2 sites. The site using index.php has no other pages listed against it when you click on the "More pages from this site" link within Yahoo and Lycos. The site using index.htm is correctly listed.

Apologies if this is the wrong group

TIA  
Dynamo
