I am using XAMPP as a gateway into running my own webserver because it was the all in one package. The only problem I have is that I cannot access MySQL from the command line and only from phpmyadmin. Phpmyadmin is a nice GUI app but I would like to be able to type my SQL from the command line does anyone know how to setup XAMPP to run MySQL from the command line.

I am running the linux version on Suse 10.0 professional.

Thanks

You should be able to run it with the mysql command. What happens when you try this?
