It seems there is something wrong with my script for the reason that it always returns, Username NOT found . I know it connects to the db fine because I don't get a error. So just been trying to figure out what's wrong. I am using PEAR btw.

Pastebin: <http://pastebin.ca/360410>

```
<?PHP
```

```
require 'DB.php';
```

```
$db = DB::connect('mysql://lol:lol@localhost/user');
```

```
if (DB::isError($db)) {die('ERROR{1}: ' . $db-
```

```
getMessage()); }else{print "We connected";}
```

```
$user = $_POST['user'];
```

```
$password = md5($_POST['password']);
```

```
$password2 = md5($_POST['password2']);
```

```
$sql = check();
```

```
function check()
```

```
{
```

```
global $db;
```

```
global $user;
```

```
$rows = $db->getAll('SELECT user_name FROM user');
```

```
if (DB::isError($db)) {die('ERROR{2}: ' . $db->getMessage());}
```

Logging Script

```
if($user){  
if(array_key_exists("$user", $rows)){print "<p><b>UserName  
AcceptED</b>";}else{print "<p><b>UserName NOT found</b>";}  
  
}else{print "<p>no username was typed";}  
  
}  
  
?>  
  
.
```
