Re: return multiple rows from sql statement

I
always
use
the
placeholder
notation
for
doing
SQL.
Concatening
SQL
strings
from
input
values
is
almost
certainly
a
safe
path
to
SQL
injection.

Not
if
you
properly
cleanse
your
input.
Ensure
numeric
values
are
really
numeric,
and
string
values
are
processed
through
mysql_real_escape_string(),
for
instance.

Thanks
for
the

Re: return multiple rows from sql statement

input,
and
yes
I
agree,
you
should
definitely
cleanse
your
input
before
feeding
it
to
the
database.
My
point
was
simply,
that
when
you
give
this
kind
of
work
to
a
framework
and
always
use
the
?
notation,
you
are
safe
from
injection,
even
if
you
forget
to
check
a
single

input
variable
(which
surely
happens
from
time
to
time).
Also
you
don't
have
to
do
the
conversi
