i tried to compile php\_imagick on my win box with visual c++ 6.0  
but i got these errors when linking:

[quote]

```
Creating library Release_TS/php_imagick.lib and object Release_TS/
php_imagick.exp
imagick.obj : error LNK2001: unresolved external symbol
_executor_globals_id
imagick.obj : error LNK2001: unresolved external symbol
zend_ce_iterator
[/quote]
```

these two symbols can be found in the php5ts.lib, but i dont know what  
makes them  
ive already add the php5ts.lib to the link libs

then i read the source of php\_imagick, and found :

there is a

[Code]

```
zend_class_implements(php_imagick_sc_entry TSRMLS_CC, 1,
zend_ce_iterator);
```

[/Code]

in the imagick.c

and also, the following:

[Code]

```
ZEND_DECLARE_MODULE_GLOBALS(imagick)
```

```
PHP_INI_BEGIN()
```

```
STD_PHP_INI_ENTRY( "imagick.locale_fix", "0", PHP_INI_ALL,
OnUpdateBool, locale_fix, zend_imagick_globals, imagick_globals )
```

```
PHP_INI_END()
```

[/Code]

may be have some relation with the '\_executor\_globals\_id'

ive tried to compile the php\_imagick with php use nmake on cmd, with a  
--enable-imagick, but still with no imagick extension been built

PS:

cant compile php\_imagick on M\$ windows ?

cant compile php\_imagick on M\$ windows ?

Windows 2003 sp2 + Visual Studio 6.0 sp6 + php 5.2.5 + imagemagick  
6.3.7 (i tried from 6.3.7-1 to 6.3.7-7) + php\_imagick (from PECL, i  
tried all the latest versions)

.
