Hello group,

I'm uploading some image files such as jpeg, png and gif. However, I must convert time to jpeg type. I have few questions:

- 1) Can I convert time in using gd library?
- 2) Currently, I check the MIME file to see what is holding (thanks to Michael) like image/jpg or image/gif or image/png. But what should be the criteria? I'm checking:

```
if ($img_array_info[mime] == "image/jpg" {  
...  
}
```

However, there are some files that rather image/jpg they have image/jpeg as mime in their headers. Should I compare it against these two criteria or there are other things I have to consider too?

Thanks,
Amit
