Hello,

Can someone try this example on PHP.NET:

http://us2.php.net/session_start

as I am getting parse errors. And tell me if it works for them?

I cannot seem to get anything to work when working with sessions, I had a look at my phpinfo.php file and everything looks ok.

This is driving me mad, as I am trying to work on a project and am getting nowhere because of this.

Thank you
