[snip]

However, the LEFT and RIGHT will take me a while to figure out.

[/snip]

FROM table a LEFT OUTER JOIN table b
ON(a.column = b.column)

Just follow the order tedd, a is on the left and b is on the right

LEFT OUTER -> a -> b (what may be in a might not be in b)
a <- b <- RIGHT OUTER (what may be in b might not be in a)

FROM table a INNER JOIN table b
ON(a.column = b.column)

a -> INNER JOIN -> b (only where in a and b)

.
