Hi, i am trying to resize the uploaded image , but the imagecreatefromjpeg(\$sourcefile) doesn't seems to work for jpg file.

when upload jpg/jpeg --notworking

```
<?php
$sourcefile = $_FILES['file']['tmp_name'];

//when echo will show --example: tmp\php119.tmp
echo $sourcefile;

$workingsource = imagecreatefromjpeg($sourcefile);
//show up nothing??????
echo $workingsource;
?>
```

when upload gif --working

```
<?php
$sourcefile = $_FILES['file']['tmp_name'];

//when echo will show --example: tmp\php119.tmp
echo $sourcefile;

$workingsource = imagecreatefromgif($sourcefile);
//show me the image resource --example: Resource id #6
echo $workingsource;
?>
```

if you know why is it not working, please tell me..
Thanks in advance!

.
