Hi Everyone,

I am working on a app where I need to be able to select all the values from a database where the 'timein' field is between a certain date range... Essentially the last 7 days...

here is the code that I am working with:

```
$rangeBegin = strtotime("Last week thursday midnight");  
$rangeEnd = strtotime("Today now");
```

```
$$SQLTEST = "SELECT * FROM `timeStore` WHERE `timein` BETWEEN {$rangeBegin} AND  
{ $rangeEnd}";  
echo "SQLTEST: " . $$SQLTEST . "<br>";  
SQLTEST: SELECT * FROM `timeStore` WHERE `timein` BETWEEN 1222315200 AND 1222920000  
Could not perform query: Query was empty
```

All of my times are stored as unix timestamps in the database, such as:

```
+-----+  
| timein | timeout | empID | record |  
+-----+-----+-----+-----+  
| 1222354037 | 1222382837 | 1 | 107 |  
| 1222440437 | 1222469237 | 1 | 108 |  
| 1222526837 | 1222555637 | 1 | 109 |  
| 1222613237 | 1222642037 | 1 | 110 |  
| 1222699637 | 1222728437 | 1 | 111 |  
| 1222359217 | 1222359220 | 2 | 115 |  
| 1222359214 | 1222359220 | 2 | 114 |  
| 1222359219 | 1222359220 | 2 | 116 |  
| 1222359231 | 1222359566 | 2 | 117 |  
+-----+
```

Anyone has any ideas? Or maybe a better way? :)
