I can't seem to get my preg_match_all() to work.

I have a HTML file setup like

```
...  
<tr>  
<td><a href="#">Overall rating</a>: </td>  
<td> 98% </td>  
</tr>  
...
```

And i am trying to extract just the 98% using preg_match_all(). I am completely new to using preg_match_all() and completely lost. Could someone give me some guidance please.

Thank you so very much!

QB
