Hi all,

I am busy trying to figure out how to get the last working day in a month.

I was wondering if there was a script already written, but this is what I imagine should work:

Get the current day and see if it's the last day of the month. If its true check if it's a Saturday or Sunday if it's either of those 2 days then return false else return true?

I also need to take public holidays into account. What would be the best solution for that? Store the public holidays in a table and check if the current day isn't a public holiday?

Any advice is appreciated.

TIA
Angelo
