I installed nmake incorrectly and solved the problem but the error message I'm now getting is as follows.

A problem was encountered while attempting to compile and install your Inline C code. The command that failed was:

```
nmake > out.make 2>&1
```

The build directory was: C:_Inline\build\hello_pl_b1a688f821f70719

To debug the problem, cd to the build directory, and inspect the output files.
