

Calling a SQL Server Stored Procedure from within Perl

Hi,

I'm trying to call a simple Stored Procedure from within my Perl script. I tested the SP named "usp_test" in the Query Analyzer and it ran OK. My perl script looks like this

```
use Win32::ODBC;
if (!$MyDB = new Win32::ODBC("DSN=MyDSN;UID=MyLoginID;PWD=MyPwd;"))
{
print "Error: Unable to connect to the database\n";
exit;
}
```

The connection is OK, I've tested it by listing all the rows in a test table. Now I have to call the SP. I tried something like this but that didn't work:

```
my $sth = $MyDB -> prepare("EXEC usp_test");
$sth -> execute;
```

Any information is welcome.

Thanks,
Ab
