Greetings,

I am trying to bcp in data to a table which is in different server.  
Though the bcp in works fine but the error file is not being created  
and rejected records are not being directyd to the error file. Query  
looks like:

```
bcp <db>..test_b_plan_cp in /home/file_out.txt -c -t '|' -S *****-U  
***** -P *****-I /home/bcp2db_sql.ini -e /home/bcp2db.error.
```

Can someone please help?

Why are you asking questions about bcp in a Perl newsgroup? You were  
helped with your Perl problems a week ago, but it seems the problem you  
are having now is strictly with bcp.

Re: Problem directing BCP Error to Error file

Sorry for the inconvenience caused. Actually the reason I posted it here because I was trying to do bcp from within a perl script and there in I was facing issues.

Is there any alternative to it? And can we use Sybase::BCP module using an ini file?

TIA

.
