I did it using 'Imagemagick' module.

usage example (cut'n'pasted from big scripture):

use Image::Magick;

[...]

```
sub gen_malgranda ($$) {  
  my $x = Image::Magick->new(size=>'160x160');  
  $x->Read('NULL:white');  
  my $p = Image::Magick->new;  
  $p->Read("$_[0]/$_[1]");  
  $p->Scale("160x160");  
  $x->Composite(image=>$p,gravity=>'center');  
  $x->Write("$_[0]/malgranda/$_[1]");  
  undef $p, $x;  
}
```

[...]

```
mkdir "/home/user/store/jpeg/malgranda";  
gen_malgranda("/home/user/store/jpeg","somefile.jpeg");
```
