I'm new to perl and have a question. The perl book says that hashes map keys to values. Using the reverse function you can map values to keys.

AFAIK, the reverse function takes a list/array, and returns it in the opposite order.

My problem is
I have a hash of arrays and I want to map an array of values to a particular key. Is there any way to do this?

Something like this?

```
@contents = (1,2,3,4,5)
$hashofarrays{key} = \@contents
```

I can then reference like follows:

```
print $hashofarrays{key}[2]
```

outputs: 3

.
