Hi All~

Is it possible to open a file and print to a specific location in the file?
For example, I have a 1K file and 0 – 511 is where the small description is stored and starting in position 512 is the path to a pdf file.... If I do not have the path in position 512 the link will be broken on web site. Pls let me know if this is possible and where I can read about it.

Thanks!
