Has anyone done any FTP'ing to IBM ZOS/390 machine.

As you can

see in the output there was a timeout due to waiting for a file to
recalled from tape to disk.

snip

My only suggestion is to increase your timeout (the default
is 2 minutes).

```
my $MyFTP = Net::FTP->new($host, timeout => 60 * 10)
```

Never even thought of that. I will do that, but it seems like
this should have generated some type of msg, maybe not an error, but at
least is there way to check warnings?

I will change give it a shot.

Thanks.

Wags ;)
