My problem is:
To install perl it is asking cc
I downloaded gcc from freeware, To install gcc: if I have cc
in path it is giving " /usr/ucb/cc:
language optional software package not installed" error.
If I don't have cc in the path it is saying cc not found.

I am not sure what is wrong.

What is wrong is that you keep coming back to the list looking like you never read our previous responses. Even when they are quoted in your email.

For questions concerning building perl, start with
<http://search.cpan.org/~nwclark/perl-5.8.6/INSTALL> and
<http://search.cpan.org/~nwclark/perl-5.8.6/README.solaris#GCC> .

You may find prebuilt gcc perls at <http://www.sunfreeware.com/> and
<http://www.blastwave.org> .

For questions concerning building gcc start at <http://gcc.gnu.org/install/> .
