Hello,

I thought some people here would be interested in reviewing this:

I plan to publish a small module to generate SQL for simple keyword searches.

The docs are here for easy HTML browsing:
<http://mark.stosberg.com/perl/SQL-KeywordSearch.html>

The preview distribution is here:
<http://mark.stosberg.com/perl/SQL-KeywordSearch-1.1.tar.gz>

If anyone has suggestions or feedback, I'm interested in discussing them before the official upload.

I've been using variations of this for small projects over the years and works great for that.

Mark
