Dear Tim Bunce

I noticed some bugs in Dependency::Grapher. I'm installing from module-dependency-1.86.tar. I'm running under Solaris.

- * Some of the README files are missing. The Module-Dependency-1.86/README references README.EXAMPLES README.COMMANDS README.MODULES. But README and README.EXAMPLES are the only ones in the distribution. (I append the tar listing at the end of this message.)
- * I'm also getting errors when I test the make. I've appended that below the tar listing. Any ideas on this?
- * Minor: The package seen multiple times warning has a misspelling on identical, i.e.
- * Package IRTIME seen multiple times (oat/lib/IRTime.pm superseded by Daily_Planning/irtime.pm, files indential)

I'd really appreciate it if you can help me get a complete distribution.
