Im trying to add more than one cookie with urllib2 but im not getting much sucess.

An example...

```
>>> req =
urllib2.Request('http://localhost',j_username=psyca&j_password=*****',{
    'Cookie':'sab=contextUrl+https%3A%2F%2Fwww.vexbr.com.br%2Fcafede%2F%7CnasIp+10.50.0.3%7Cneed
    'Cookie':'JSESSIONID=DFA58D39389BA5E3CEB5C92F9308792C',
    'Content-type':'application/x-www-form-urlencoded',
    'Content-length':str(len('j_username=psyca&j_password=*****'))})
>>> urllib2.urlopen(req)
```

```
nebula:/home/nebuloso# nc -l -p 80
POST / HTTP/1.0
Host: localhost
User-agent: Python-urllib/2.1
Cookie: JSESSIONID=DFA58D39389BA5E3CEB5C92F9308792C
Content-length: 34
Content-type: application/x-www-form-urlencoded
```

```
j_username=psyca&j_password=*****
```

and another thing , headers is a dic , you cant add 2 equal keys...
dunno how to do it.

Thanks.
