- 

Does anyone know of any decent documentation on Mark Hammond's win32all modules? I have tried looking at the documentation .chm file that comes with it, Python Programming On Win32 (OReilly book) and ActiveState's documentation and have found them all lacking -- yes I need it broken down to me.

What I am hoping to do is to work on some Python versions of PSTools. I think the win32 modules will be perfect for helping me do this, however, I am having a (more than it should be) difficult time making sense of the win32process module.

Any help would be appreciated.

Thanks,

Harlin Seritt
