Hi all

Am trying to read an html page using win32com in the following way.

```
from win32com.client import Dispatch

ie = Dispatch("InternetExplorer.Application")

ie.Navigate("https://secure.authorize.net/")

doc = ie.Document

print doc.body.innerHTML
```

with this code am easily able to read the mentioned page from the pythonwin interactive window, but the same code if I write it in some \*.py file, am not able to read the page.

The following error it throws when I compile the file.

Traceback (most recent call last):

File  
"C:\Python23\Lib\site-packages\pythonwin\pywin\framework\scriptutils.py",  
line 310, in RunScript

exec codeObject in main . dict

File "C:\Python23\Lib\site-packages\Script1.py", line 14, in ?

problem with from win32com.client import Dispatch

ie.Quit()

File "C:\Python23\Lib\site-packages\win32com\client\\_\_init\_\_.py",  
line 456, in \_\_getattr\_\_

return self. ApplyTypes (\*args)

File "C:\Python23\Lib\site-packages\win32com\client\\_\_init\_\_.py",  
line 446, in ApplyTypes

return self. get\_good\_object (

com\_error: (-2147352567, 'Exception occurred.', (0, None, None, None,  
0, -2147467259), None)

if any body has the answer for this please help me in this.

Thanks and regards

Yogi

.
