hi thanks for all the help
actually i am doing it the hard way

```
alist = [ '<div align="right"><font size="-1">TEST<br>',  
'<p align="center"><strong><br>',  
'blah' ]
```

```
f = open('test.html','w')  
f.writelines(alist)  
f.close()
```

but everytime i hit

```
....  
alist = [ '<div align="right"><font size="-1">....  
ValueError: unsupported format character "" (0x22) at index 14
```

what does it mean?

i tried alist = ['<div align="right">TEST
'] on the IDE and it works

thanks.

.
